Children in Immigrant Families in the District of Columbia Fact Sheet

September 2009

PROMOTING POSITIVE OUTCOMES for children in immigrant families is critical given that they are among the fastest growing segment of the child population (ages 0-17). This brief is part of a series of 50 state-specific papers intended to provide information about the importance of reducing language and literacy barriers to ensure that children in immigrant families achieve success in school and work settings. The results presented here are combined from the American Community Survey for 2005, 2006, and 2007. Funding was provided by the Annie E. Casey Foundation.

Children in immigrant families learning English are a key to the District of Columbia's future

Children with at least one immigrant parent account for 19% of all children in the District of Columbia, and 6% of children in the District of Columbia live with English language learner parents only.

Children in immigrant families have diverse national origins

The largest proportion of children in immigrant families in the District of Columbia have origins in Central America (34%) and El Salvador (31%). Many also have origins in Africa (14%), the Caribbean (12%), and Western Europe (10%).

Children in immigrant families have deep roots in the District of Columbia

This is reflected in their parents' length of residence and citizenship, their own citizenship, their parents' and their own English fluency, and their families' commitment to homeownership.

Most children in immigrant families have long-term resident parents

Seven of every ten (70%) children in immi-

grant families in the District of Columbia have parents who have lived in the United States 10 or more years.

One-half of children in immigrant families have American citizen parents

One-half (51%) of children in immigrant families in the District of Columbia have parents who are U.S. citizens. The proportion is 60% for those with English fluent parents only.

Most children in immigrant families are American citizens

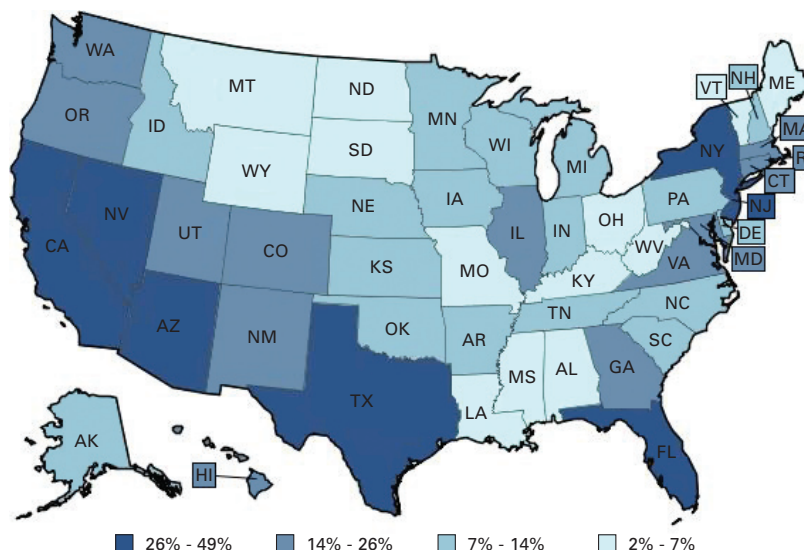

More than four in five (86%) children in immigrant families in the District of Columbia are U.S. citizens. The proportion is nine in ten for children with English fluent parents only (92%), but even among children with English language learner parents only, 76% are American citizens.

Children in immigrant families have diverse language environments

Most children in immigrant families grow up in complex language environments that can help promote the development of English language skills. A smaller proportion lives in linguistically isolated households.

Children in immigrant families (Percent – 2007)

One-half of
children in
immigrant families
in the District of
Columbia have
parents who are
U.S. citizens.

The language skills of parents in immigrant families have important implications for language acquisition among children because parents provide the earliest environment in which children learn to speak. The English language skills of parents may also have important implications beyond the role in children's language acquisition. English language learner parents are less likely to find well-paid full-time year-round jobs and may be less able to help their children study for subjects taught in English.

Most children in immigrant families have an English fluent parent

Seven of every ten (69%) children in immigrant families in the District of Columbia live with at least one English fluent parent, while the others (31%) live with parents who are English language learners only. Of the 69%, about three-fourths live with English fluent parents only, and about one-sixth live with mixed-fluency parents, that is, with one English fluent parent and one English language learner parent.

Four-fifths of children in immigrant families are English fluent

Eighty-three percent of children in immigrant families in the District of Columbia

speak English exclusively or very well.

More than two-fifths (46%) of children in immigrant families in the District of Columbia speak another language at home and speak English very well. Thus, many children in immigrant families are well-positioned to become fluent bilingual speakers, writers, and readers—if they receive formal training in both English and the native language of their parents.

But many children live in linguistically isolated households

One in five (19%) children in immigrant families in the District of Columbia live in linguistically isolated households, in which no one over the age of 13 speaks English exclusively or very well.

Two-fifths of children in immigrant families live in family-owned homes

Forty-five percent of children in immigrant families in the District of Columbia live in family-owned homes. The proportion is 55% for those with English fluent parents only, but is only 33% for those with English language learner parents only.

Children in immigrant families experience important family strengths

These strengths include having two parents (and often other adult relatives) in the home who have a strong work ethic and are available to care for and nurture their children.

Most children in immigrant families have two parents in the home

Children in immigrant families in the District of Columbia are more likely than children in native-born families to live with two parents. Among children in immigrant families, 73% live with two parents which is much greater than the proportion of children in native-born families (36%). Seven of every ten children in immigrant families live with two parents if they have English fluent parents only (71%), which is somewhat less than the proportion for Whites in native-born families (85%).

Children in immigrant families in the District of Columbia are about as likely as Whites in native-born families to have another adult relative in the home (20% vs. 19%). The proportion is smaller for children in immigrant families with English fluent parents only (13%).

Children in immigrant families experience a strong family work ethic

Nearly nineteen of every twenty (93%) children living with a father have a father who works to support the family, among children in immigrant families and native-born families alike.

Four of every five (82%) children in immigrant families in the District of Columbia with a father in the home have a father working full-time year-round, compared to 73% in native-born families. The proportion is also 82% for children with English fluent parents only.

Three of every four (74%) children in im-

migrant families in the District of Columbia with a mother in the home have a mother working to support the family. This is about the same as the proportion for children in native-born families (73%). Children in immigrant families with English fluent parents only and children in native-born families are equally likely to have a working mother (73% each).

Two of every five (44%) children in immigrant families in the District of Columbia with a mother in the home have a mother employed full-time year-round. Children in immigrant families are only 2 percentage points less likely than those in native-born families to have a mother working full-time (44% vs. 46%).

Children in immigrant families experience important challenges

Many children in immigrant families experience the challenges associated with low parental education, low parental hourly earnings, and high family poverty, which, in turn, can lead to overcrowded housing and limited access to early education programs.

Many children of immigrants have parents with limited education

One of every four (24%) children in immigrant families in the District of Columbia has a father who did not graduate from high school, and the proportion is similar for mothers. There is no difference between children in immigrant families with English fluent parents only and children in native-born families (9% each).

One in seven (15%) children in immigrant families in the District of Columbia has a father who has completed only 8 or fewer years of school.

Parents with little schooling may be less comfortable with the education system, less able to help their children with school work, and less able to effectively

More than two-fifths of children (46%) in immigrant families in the District of Columbia speak another language at home and speak English very well.

Almost three-fourths
of the children in
immigrant families
live with two
parents (73%).

negotiate with teachers and education administrators.

Many children of immigrants have parents with low hourly earnings

One of every five (20%) children in immigrant families in the District of Columbia with a father in the home has a father earning less than 200% of the minimum wage, that is, less than \$10.30 per hour. (The Federal Minimum Wage increased from \$5.15 to \$5.85 on July 24, 2007 and to \$7.25 on July 24, 2009.) This is two times greater than the proportion among those in native-born families (10%). There is little difference between the children in native-born or immigrant families with English fluent parents only (10% vs. 12%).

Many children in immigrant families live below the poverty line

One in eight (13%) children in immigrant families in the District of Columbia is officially poor. Overall, children in immigrant families in the District of Columbia are half as likely as those in native-born families to be poor (13% vs. 29%), but they are six times more likely than Whites in native-born families to live in poverty (13% vs. 2%).

The official poverty measure is used most often to assess economic deprivation in the U.S., but more than a decade ago a National Research Council (NRC) report urged that the official measure be revised because "...it no longer provides an accurate picture of the differences in the extent of economic poverty among population groups or geographic areas of the country, nor an accurate picture of trends over time" (Citro & Michael, 1995, p. 1). The proportion of families with incomes below 200% of the poverty line is often used in policy discussions.

One-third of children of immigrants in the District of Columbia live in a family with an income below 200% of the official poverty line. Children in immigrant families are about two-thirds less likely than those in

native-born families to have family incomes below 200% of the official poverty line (35% vs. 49%). Among children of immigrants with English fluent parents only, 24% live below the 200% poverty line.

Many children in immigrant families live in overcrowded housing

Families with low wages and below-poverty-line incomes may live with other family members or nonrelatives to share housing costs and make scarce resources go further, leading to overcrowded housing conditions.

One of every three children in immigrant families in the District of Columbia lives in overcrowded housing. Children in immigrant families are two times more likely than children in native-born families to live in overcrowded housing (33% vs. 17%). Overcrowding is about one-third more prevalent for children in immigrant families with English fluent parents only than it is for children in native-born families (23% vs. 17%).

Children in immigrant families have low early education enrollment

Children in immigrant families in DC are less likely than children in native-born families to be enrolled in pre-k/nursery school at age 3 (16% vs. 34%) and at age 4 (45% vs. 59%). At age 3, the proportion of children in immigrant families enrolled in preschool programs declines from 27% for those with English fluent parents only to 6% for those with English language learner parents only. Similarly, at age 4, the proportion enrolled declines across the three parental language groups. Among children in immigrant families with origins in Mexico, enrollment in early education programs is even lower at age 3 (6%) and age 4 (42%).

Cultural preferences are sometimes cited as a reason for lower enrollment in early education programs among immigrant groups, especially among Hispanics. But recent research

indicates that socioeconomic barriers can account for at least one-half and perhaps the entire enrollment gap in early education that separates children in immigrant families from Mexico, for example, and White children in native-born families (Hernandez, Denton, & Macartney, in press).

These results may be surprising, but it is important to note that these estimates are consistent with the strong commitment to early education in contemporary Mexico, where universal enrollment at age 3 is becoming obligatory in 2008–2009 (OECD, 2006). In fact, in Mexico where preschool is free, 81% of children age 4 were enrolled in 2005, compared to only 71% of White children in U.S. native-born families and 55% of children in U.S. immigrant families from Mexico in 2004 (Yoshikawa et al., 2006).

Policies and programs to foster children's success

The District of Columbia, as well as the Federal Government, pursue many policies and programs to foster positive development among children. Such government activities are no less important for children in immigrant families than for those in native-born families, but particularly for children with English language learner parents only, special features may be required to assure that children in immigrant families have the same opportunities to succeed as all children.

Early education programs are important for all children, but may be particularly valuable for the cognitive and language development of children in English language learner families (Gormley, 2007, 2008; Gormley & Gayer, 2005; Gormley et al., 2005). Insofar as socioeconomic barriers play a critical role in limiting access of key immigrant groups to early education, additional resources would help these and other parents to achieve their hope of enrolling their children in early education programs.

There is a need for education policies, programs, and curricula that encourage fluency not only in English but also in the home languages of children and that foster bilingual spoken fluency and literacy (reading and writing). This need exists because language development is critical to the success of children in school, and research has shown that the development of bicultural language skills and identity is related to the successful educational and social integration of children in immigrant families (Espinosa 2007, 2008; Fuller, 2007; Portes & Rumbaut, 2001; Sam et al., 2006). Two-generation family literacy programs could also foster the educational, economic, and social integration of children and parents in immigrant families.

The successful integration of many children and parents in immigrant families in some communities may require active outreach in the home languages of families by schools, health care facilities, and other organizations and institutions serving children and families. The successful integration of these children and parents will also be fostered by the development of a culturally competent workforce in these organizations and institutions. ♦

About This Series

The Center for Social and Demographic Analysis (CSDA) of the University at Albany, State University of New York, collaborated with the Annie E. Casey Foundation on this project. The Center supports the efforts of population scientists at the University at Albany to conduct innovative research on such demographic topics as immigration, residential segregation, and health disparities. CSDA researchers Donald J. Hernandez, Ph.D., Victoria L. Blanchard, M.S., Nancy A. Denton, Ph.D., and Suzanne E. Macartney, M.A. conducted the analyses on which the series is based and wrote the briefs while the Annie E. Casey Foundation edited, designed and disseminated them.
